

Quick Survey - Fall 2007 (Background and Finances)

Basic Frequencies of Demographics Compared to Campus Population

The In-class, On-Line and Email samples were combined into one data set to produce the survey results. The In-Class and On-Line samples were stratified cluster samples of students in courses based on course attributes (day/eve, college, and course level). The In-Class sample completed a paper survey distributed by their instructor. Students in the On-Line sample were notified through Blackboard to log on and take the survey. Students in the Email sample, selected randomly from all enrolled students who were not in courses selected for the prior samples, were sent a link to the survey to complete on-line. The demographics below demonstrate that the respondents to this survey represent a cross-section of the campus population.
