Learning How to Lead and How to Learn from Each Other

*Presenters:* Rushi Patel
*Mentors:* Dr. Nancy Deng, Dr. Sheng Yi

Our project focuses on building and strengthening their digital competence in using Microsoft Excel for data organization, visualization, and analysis. Our project team (2 faculty mentors and 4 student trainers) designed and presented a campus-wide Excel Skills Training Workshop to 275 CSUDH students in three live sessions (via Zoom) on March 12 & 13, 2021. This Symposium presentation includes a summary of the project activities, my expectation for the project, the important skills I learned, the collaboration among my project team members, the influence of this project experience on my academic interests and/or professional career, and my understanding of community engagement and service learning. Considering the Dominguez Hills campus and students as my community, I believe my participation and contribution to this project helped students engage in the digital skills training by showing them there is more to it than we showcased. Letting students know that we are students just like they are can encourage them to think that “if they can do it, I can do it” mentality.
