There Is Always Going to Be Something New to Learn

**Presenters:** Megan Baker  
**Mentors:** Dr. Nancy Deng, Dr. Sheng Yi

Our project team designed and presented a campus-wide Excel Skills Training Workshop to 275 CSUDH students in three live sessions (via Zoom) on March 12 & 13, 2021. The objective of our project is to build and strengthen students’ digital competence in using Microsoft Excel for data organization, visualization, and analysis. This presentation includes a summary of the project activities, my expectation for the project, the important skills I learned, the collaboration among my project team members, the influence of this project experience on my academic interests and/or professional career, and my understanding of community engagement and service learning. A specific moment in the project that stood out for me was during the first live session when I was presenting my Excel analysis part, I was very nervous about fumbling my words and forgetting my Excel steps. I would practice before every session to ensure that I was able to cover everything that I explained in my video. Overtime, it became easier to present and I was excited to teach my peers more about Excel. This moment is significant because I was able to leave my comfort zone to speak and share my knowledge with my peers.
