

# TAKE BACK THE TAP

Pollution in  
communities near  
bottling facilities

Oil and water  
consumption from  
plastic bottle  
manufacturing

## 1. REDUCE

Pollution, environmental impacts & strain on your wallet by choosing tap...it's more strictly tested than bottled water and free!

## 2. REUSE

One reusable bottle can easily replace the 167 plastic water bottles the average American goes through per year. \*

## 3. REFILL is better than RECYCLE

Only 23% of plastics ever make it to recycling.\* Most end up in the landfill or in the environment. Refilling a reusable water bottle is always better than relying on a single use plastic bottle (which often contains additional unhealthy BPA's and phthalates as part of the plastic production process).

**Drink and refill from the fountain**

Better for our communities. Better for the environment.  
Taking back the tap starts with **you**.
